Docket No.: ACMP0035USA

10 Title: MOBILE PHONE FOR INFORMING USERS OF RADIATION POWER
LEVELS

To: The Commissioner of Patents
P.O. BOX 1450
Alexandria, VA 22313-1450

15

Subject: Information disclosure statement Under
37C.F.R. §1.56.

Dear Sir:

20

This is an Information Disclosure Statement in accordance with
the duty to disclose information material to patentability under
37 C.F.R. §1.56. Applicant wishes to make of record the
documents listed on the accompanying form PTO/SB/08. It is
25 respectfully requested that the examiner initials the cited
references on the form and that it be made of record in the
application and that a copy of the initialed form be sent to
the applicant with the next communication from the examiner.
Since the IDS is filed before the mailing date of a first Office
30 action on the merits, consideration of the information
disclosure statement is hereby requested according to
37C.F.R. §1.97(b).

The prior art website documents were cited in communications
35 from the Taiwan Intellectual Property Office on Aug.5, 2004.

They were downloaded from the following websites:

http://www.eprice.com.tw/mobile/phone/?prod_id=71&data=true

<http://life.nthu.edu.tw/~rrand/90sl/b881618/menu/mobil/nokia.htm>

- 5 http://www.eprice.com.tw/news/?news_id=6, http://www.eprice.com.tw/mobile/phone/?prod_id=33

10 The website documents are submitted with the IDS. Applicant sincerely hopes that the examiner can consider the website documents disclosed in the information disclosure statement. Although the second website can no longer be linked to the document cited by the Taiwanese examiner, the document is still submitted with the IDS.

15 The first website document teaches a NOKIA 6150 cellular phone. According to the first website document, NOKIA 6150 is released in 1998. It has a tested specific absorption rate (SAR) of 0.69W/kg.

20 The second website document teaches that upon entering the Net monitor, NOKIA 6150 can measure and display its radiation power level between the range of level 1 and level 19. The Net monitor is a software indicator for displaying certain information such as radiation power level when nothing else appears on the screen.

25 That is, the Net monitor can display information only when the screen of the mobile phone doesn't need to display any other functionality. For example, when dialing the phone, the Net monitor will automatically disappear because the screen will display other information. The Net monitor will reappear on the screen when the phone call is terminated.

30 The third website document discloses a MOTOROLA V8088 cellular phone. MOTOROLA V8088 will emit a warning signal when the battery power level is below a threshold. Further when receiving an incoming call, a light source with selectable color will flash to warn the user.

A comparison of the cited art and claim 1 of the present application is described hereinafter. Claim 1 is repeated below:

5

1. A mobile phone comprising:

a processor for controlling operations of the mobile phone;

10 a power modulating module for controlling a power level of a communication signal so as to generate a corresponding transmission signal;

a power measuring circuit electrically connected to the power modulating module for measuring a power level of the transmission signal so as to generate a
15 corresponding result;

an antenna electrically connected to the power measuring circuit for generating a corresponding alarming signal according to the result; and

20 an alarming module electrically connected to the alarm processing module for generating a corresponding sign according to the alarming signal for indicating the power level of the transmission signal.

25 It is clear that the mobile phone in claim 1 of the present application comprises an alarming module for generating a corresponding sign according to the alarming signal for indicating the power level of the transmission signal. Therefore, the user will be warned when the radiation power of
30 the mobile phone is beyond a dangerous level to avoid possible health injury.

However, none of the prior art web documents teaches any method or device to warn the user that the radiation power of the mobile

phone has reached a dangerous level. Although Net monitor in the second website can display radiation power level, it fails to deliver a warning signal when the radiation power level is too high. Further the Net monitor cannot display information during a phone call. In other words, when a user is having a conversation over the phone, the Net monitor automatically stops displaying information on the screen. Therefore the user cannot check the power level during the phone call. And that's the time the user's health is exposed to danger.

10

Although the third website MOTOROLA V8088 will emit a warning signal when the battery power level is below a threshold, and will flash its light source when receiving an incoming call, MOTOROLA V8088 has not taught or disclosed any means for warning a user when the radiation power level is too high. Since none of the cited reference teaches or suggests warning a user when the radiation power level reaches a dangerous level, Claim 1 of the present application is not obvious over the website documents.

20

Further Claims 2-15 are dependent on Claim 1, Claims 2-15 are not obvious over the website documents if Claim 1 is not.

25

Respectfully Submitted,

5 Winston Hsu
